Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pohlman (US 1,215,986) in view of Mitzel et al. (US 6,402,338).

Pohlman discloses (see Figure) a container [10d] separated into two portions: an inner portion [11d] and an outer portion [A4] having an earth. Flowers planted into the earth are illuminated by a light source having conductor for connection with a power supply located out of the device.

Pohlman discloses the instant claimed invention except for solar plates and a battery.

Mitzel et al. disclose (Figs. 1, 3, 4) an enclosure illumination system [10] having a plurality of solar plates [16], [18], a light source [14] and a batteries (col.4, lines 4-11). The light element is actuated only when no external light impinges upon the solar battery, for example, night time. When external light, such as sunlight, impinges upon the solar battery, the light source is prevented from actuating. The solar battery charges a rechargeable battery for the use in providing power when the light source is actuated (col.2, lines 60-64).

Art Unit: 2875

Using this system in a device of Pohlman will allow to improve the device by eliminating a long conductor for connecting with the power source and turning the device on/off automatically in accordance with ambient illumination, without user's operation.

It is understood, that outer portion of the container may contain any desired decoration depending on necessity.

It would have been obvious to one having ordinary skill in the art, at the time the invention was made, to provide the illumination system of Mitzel et al. for the device of Pohlman for the purpose of eliminating a long conductor for connecting with the power source and turning the device without user's action.
